

All fans sold by Geneva Industrial Group are intended for **Indoor Use Only**, unless specifically identified otherwise under the product listing.

Please be sure to read the instructions prior to use, and follow all guidelines written in the instruction booklet.

Fan blades and grilles maybe cleaned with warm water and a mild soap. Never spray the motor or any of the electrical parts with water, never immerse the motor or electrical parts in water.

Do not place or run a fan or electrical appliance on or in a wet location during operation.

Do not block airflow to the motor.

For best airflow / circulation make sure you position the fan where airflow is not restricted from either the back of the fan, or the front of the fan... it needs to be able to draw in as much air as it is pushing out.

Be sure to position the fan where there will not be a risk of anyone tripping over the cord set.
